

Chapter 2

HARDWARE INSTALLATION

2.1 Central Processing Unit: CPU

The mainboard operates with **Intel® Pentium® II processor with MMX™ technology**. The mainboard uses a CPU Slot called Slot 1 for easy CPU installation and a DIP switch (SW1) to set the proper speed for the CPU. The CPU should always have a Heat Sink and a cooling fan attached to prevent overheating.

2.1-1 CPU Installation Procedures

There are two kinds of Pentium® II processor that is currently used: the OEM Pentium® II processor and the Boxed Pentium® II processor. OEM Pentium® II processor has no Heat Sink, Fan and Heat Sink Support, while the Boxed Pentium® II processor is provided with Heat Sink w/ fan and Heat Sink Support.

A. OEM Pentium® II processor Installation Procedures

Required Things:

Pentium® II processor - Processor.

***Retention Mechanism(RM)** - Plastic Guide that holds the S.E.C. Cartridge in the Slot 1 connector.

***Retention Mechanism Attach Mount(RMAM)** - Bolt/Bridge assemblies inserted up through the bottom of the motherboard. RM secures to RMAM (2 RMAM required per RM).

***Heat Sink Support Base (HSSBASE)** - Plastic support bar mounted to the mainboard under the ATX heatsink.
(One leg is always bigger than the other one)

***Heat Sink Support Pin (HSSPIN)** - Plastic pins inserted through the HSSBASE to secure it to the mainboard (2 required per Assembly).

***Heat Sink Support Top Bar (HSSTOP)** - Plastic bar that clips onto the HSSBASE through the fins on the ATX heatsink.

****Heat Sink w/ fan** - Heat Sink that can be attached to the **Pentium® II processor** with metal clip.

Note: * Provided by MSI mainboard.

** Provided by Special request.

Step 1: Insert the Retention Mechanism Attach Mount at the bottom of the mainboard.

Step 2: Install the Retention Mechanism.

Look for the key on Slot 1, and match it with the Notch Key on the Retention Mechanism for proper direction. Then, attach the Retention Mechanism to the Retention Mechanism Attach Mount. Use a Screwdriver to secure the Retention Mechanism.

Step 3: Install the Heat Sink Support Base.

Look for the Two holes across Slot 1, and match it with the Two legs of the Heat Sink Support Base for the proper direction. Take note that one hole/leg is bigger than the other. The Four top pins of the Heat Sink Support Base should also be oriented towards Slot 1.

Push the Heat Sink Support Base onto the mainboard, until you hear a click sound. Check for a perfect fit.

Step 4: Install the Heat Sink Support Pin.

Push the Heat Sink Support Pins onto the two holes of the Heat Sink Support Base. Check for a perfect fit. These pins are used to secure the Heat Sink Support Base.

Step 5: Install the Heat Sink with Fan to the Processor.

Push down the metal clips, so that they are in line with the back of the Heat Sink. Be careful, so as not to detach the metal clips from the Heat Sink.

In case the metal clips are detached from the Heat Sink, re-attach them. Look for the arrow on the metal clip. This arrow should be pointing down and aligned with the Heat Sink Support Base Holder.

Attach the Heat Sink to the processor.

Pentium® II processor (Back)

Heat Sink w/ Fan(Back)

- Look at the back of the Heat Sink and take note of the 2 secure posts. Insert these 2 Secure posts to the 2 secure holes on the back of the processor.
- Align the ears of the metal clips with the clip holders on the back of the processor. Use a screw driver to push the metal clips onto the clip holders. Check for a perfect fit.

Step 6: Install the Processor.

Unlock the Processor by pushing in the Processor Locks.

Insert the Processor like inserting a PCI or an ISA card.

Step 7: Lock the Processor Locks.

Secure the CPU by pulling the Processor Locks out.

Step 8: Install the Heat Sink Support Top Bar.

Push the Heat Sink Support Top Bar to the Heat Sink Support Base, Until you hear a “click” sound. Check for a perfect fit.

**Heatsink
Support Top
Bar**

The installation is now complete.

B. Boxed Pentium® II processor Installation Procedures

The Boxed Pentium® II processor has a built- in Fan and Heat Sink. It also has a Heat Sink Support. So if you're going to use the Boxed processor, all you need is the Retention Mechanism.

Step 1: Insert the Retention Mechanism Attach Mount at the bottom of the mainboard.

Step 2: Install the Retention Mechanism.

Look for the key on Slot 1, and match it with the Notch Key on the Retention Mechanism for proper direction. Then, attach the Retention Mechanism to the Retention Mechanism Attach Mount. Use a Screwdriver to secure the Retention Mechanism.

Step 3: Install the Heat Sink Support Base.

Look for the 2 holes across Slot 1, and match it with the 2 Heat Sink Support Base. Take note that one hole/base is bigger than the other.

Push the Heat Sink Support Base onto the mainboard, until you hear a click sound. Check for a perfect fit.

Step 4: Install the Heat Sink Support.

Attach the 2 Heat Sink Supports to the sides of the Processor. These Heat Sink Supports will fit in any direction, so be sure that the Heat Sink Support Locks are oriented outwards for the proper direction.

Step 5: Unlock the Processor Locks and Heat Sink Support Locks.

Push in the Processor Locks. Open the Heat Sink Support Locks.

Step 6: Insert the Processor like inserting a PCI or an ISA card.

PC-3746

Step 7: Lock the Processor Locks and Heat Sink Support Locks

Secure the CPU by pushing out the Processor Locks. Close the Heat Sink Support Locks.

The installation is now complete.

2.1-2 CPU Speed Setting: SW1

To adjust the speed of the CPU, you must know the specifications of your CPU (*always ask the vendor for CPU spec.*). Then look at **Table 2.1 (200 ~ 533MHz/300 ~ 800MHz Intel® Pentium® II processor)** for setting.

Table 2.1 200 ~ 533MHz/300 ~ 800MHz Intel® Pentium® II processor

CPU SPEED (FSB 66/100MHz)	CORE/BUS RATIO SW1	CPU SPEED (FSB 66/100MHz)	CORE/BUS RATIO SW1
200/300MHz (i.e. x 3)		400/600MHz (i.e. x 6)	
233/350MHz (i.e. x 3.5)		433/650MHz (i.e. x 6.5)	
266/400MHz (i.e. x 4)		466/700MHz (i.e. x 7)	
300/450MHz (i.e. x 4.5)		500/750MHz (i.e. x 7.5)	
333/500MHz (i.e. x 5)		533/800MHz (i.e. x 8)	
366/550MHz (i.e. x 5.5)		Note: Switch 5 and 6 by default are off.	

Note: If user set pin 5 of SW1 to “ON”, then the motherboard can set the 66.6MHz CPU to 100MHz FSB. Divide the CPU speed by the FSB frequency and get the closest core/ bus ratio then set pins 1 to 4 of SW1. Though the motherboard provides this function, it is not recommended because it might cause instability, or unable to power on. Long term usage may shorten the lifespan of the CPU. Thus, we strongly discourage the use of this function except for testing purposes. If this function is used and creates damage, the user will take whole responsibility.

2.1-3 CPU Terminator

The CPU terminator is used, when only one CPU is installed. You must always install the CPU terminator on the empty slot. For Example: If you install the CPU on the 1st slot, then you must install the CPU terminator on the 2nd slot or vice versa.

CPU Terminator

Important:

To use dual CPU, it is strongly advised that same CPU speed and CPU stepping is used: which means that if you install 233MHz in the 1st CPU slot, then you must also install 233MHz on the 2nd slot.

2.1-4 Fan Power Connectors: CFAN1/CFAN2/CSFAN1/PSFAN1

These connectors support system cooling fan with +12V. It supports three pin head connector. When connecting the wire to the connector, always take note that the red wire is the positive and should be connected to the +12V, the black wire is Ground and should be connected to GND. If your mainboard has System Hardware Monitor chipset on-board, you must use a specially designed fan with speed sensor to take advantage of the CPU fan speed monitor feature.

CFAN1 : processor fan
CFAN2 : processor fan
PSFAN1 : power supply fan
CSFAN1 : system fan

Note: There are four fan connectors provided by this mainboard. But the System Hardware Monitor can only monitor up to three fans, so the PSFAN1 is not supported. For fans with speed sensor, every rotation of the fan will send out 2 pulses. System Hardware monitor will count and report the fan rotation speed.

2.2 Clear CMOS Jumper: JBAT1

A battery must be used to retain the mainboard configuration in CMOS RAM. You must short 1-2 pins of JBAT1 to keep the CMOS data.

JBAT1	Function
	Keep Data
	Clear Data

Note: You can clear CMOS by shorting 2-3 pin, while the system is off. Then, return to 1-2 pin position. To be able to clear the CMOS, you need to unplug the power plug of the system, because there’s a 3V standby power for PIIX4E chipset which is provided by the power supply. Otherwise, the CMOS will not be cleared.

2.3 Power On Mode Jumper: JIPWR

The mainboard supports two kinds of system boot up: the Boot-Up by switch and the Immediate Boot-Up. With the Boot-Up by Switch, the system will boot up only when the power on switch is pressed. For Immediate Boot-Up, the system will boot up instantly when the power connector is connected into the system.

A. Factory Default Setting for JIPWR is “short” (Boot-Up by Switch)

- Power Management Enabled: During Power On, press the power button switch and the system goes into suspend mode. Press it more than four seconds and the system will power off.
- Power Management Disabled: During Power On, press the power switch button and the system will power off.

B. Immediate Boot-Up

The system will boot up instantly when the power connector is connected into the system.

Table 2.3: Power On Mode Feature

JIPWR	Feature
	Select Boot-Up by Swtich
	Select Immediate Boot-Up

Note: Short **JIPWR**, when using Boot-Up by Switch feature. Open **JIPWR**, to enable Immediate Boot-Up.

2.4 Memory Installation

2.4-1 Memory Bank Configuration

The mainboard supports a maximum of 1 GB memory for registered DIMM and 512MB for unbuffered DIMM: It provides four 168-pin DIMMs (Double In-Line Memory Module) sockets. It supports 8 MB to 256 Mbytes DIMM memory module.

There are two kinds of DIMM specification supported by this mainboard: PC100 and PC66. If you use 66MHz CPU Bus Frequency, these two DIMM Specs. is supported. If you use 100 MHz CPU Bus Frequency, only PC100 DIMM Specs. is supported.

2.4-2 Memory Installation Procedures

A. How to install a DIMM Module

Single Sided DIMM

Double Sided DIMM

1. The DIMM slot has a two Notch Key “VOLT and DRAM”, so the DIMM memory module can only fit in one direction.
2. Insert the DIMM memory module vertically into the DIMM slot. Then push it in.

3. The plastic clip at the side of the DIMM slot will automatically close.

2.4-2 Memory Population Rules

1. Supports SDRAM.
2. Supports **registered/unbuffered** DIMM.
3. To operate properly, at least one 168-pin DIMM module must be installed.
4. This mainboard supports Table Free memory, so memory can be installed on DIMM1, DIMM2, DIMM 3, or DIMM 4 in any order.
5. Supports only 3.3 volt DIMM.
6. The DRAM addressing and the size supported by the mainboard is shown below:

Table 2.4-1 SDRAM Memory Addressing

DRAM Tech.	DRAM Density & Width	DRAM Addressing	Address Size		MB/DIMM	
			Row	Column	Single no. Side(S) pcs.	Double no. Side(D) pcs.
16M	1Mx16	ASYM	12	8	8MBx4	16MBx8
	2Mx8	ASYM	12	9	16MBx8	32MBx16
	2Mx8	ASYM	13	8	16MBx8	32MBx16
	4Mx4	ASYM	12	10	32MBx16	64MBx32
	4Mx4	ASYM	14	8	32MBx16	64MBx32
64M 2 bank	2Mx32	ASYM	12	9	16MBx2	32MBx4
	2Mx32	ASYM	13	8	16MBx2	32MBx4
	4Mx16	ASYM	12	10	32MBx4	64MBx8
	4Mx16	ASYM	14	8	32MBx4	64MBx8
	8Mx8	ASYM	14	9	64MBx8	128MBx16
64M 4 bank	16Mx4	ASYM	14	10	128MBx16	256MBx32
	2Mx32	ASYM	13	8	16MBx2	32MBx4
	4Mx16	ASYM	14	8	32MBx4	64MBx8
	8Mx8	ASYM	14	9	64MBx8	128MBx16
	16Mx4	ASYM	14	10	128MBx16	256MBx32

2.5 Case Connector: JFP1

The Power Switch, Reset Switch, Key Lock, Power LED, Speaker and HDD LED are all connected to the JFP1 connector block.

2.5-1 Power Switch

Connect to a 2-pin push button switch. This switch had the same feature with JRMS1.

2.5-2 Reset Switch

Reset switch is used to reboot the system rather than turning the power ON/OFF. Avoid rebooting while the HDD LED is lit. You can connect the Reset switch from the system case to this pin.

2.5-3 Keylock

Keylock allows you to disable the keyboard for security purposes. You can connect the keylock to this pin.

2.5-4 Power LED

The Power LED is always lit while the system power is on. You can connect the Power LED from the system case to this pin.

2.5-6 Speaker

Speaker from the system case is connected to this pin.

If on-board speaker is available:

Short pin 14-15: On-board speaker Enabled.

Open pin 14-15: On-board speaker Disabled.

2.5-7 HDD LED

HDD LED shows the activity of a hard disk drive. Avoid turning the power off while the HDD led is lit. You can connect the HDD LED from the system case to this pin.

2.6 Floppy Disk Connector: FDC

The mainboard also provides a standard floppy disk connector FDC that supports 360K, 720K, 1.2M, 1.44M and 2.88M floppy disk types. This connector support the provided floppy drive ribbon cables.

2.7 Hard Disk Connectors: IDE1 & IDE2

The mainboard has a 32-bit Enhanced PCI IDE Controller that provides PIO mode 0~4, Bus Master, and Ultra DMA/33 function. It has two HDD connectors IDE1 (primary) and IDE2 (secondary). You can connect up to four hard disk drives, CD-ROM, 120MB Floppy and other devices to IDE1 and IDE2. These connectors support the provided IDE hard disk cable.

IDE1(Primary IDE Connector)

The first hard drive should always be connected to IDE1. IDE1 can connect a Master and a Slave drive. You must configure second hard drive to Slave mode by setting the jumper accordingly.

IDE2(Secondary IDE Connector)

IDE2 can also connect a Master and a Slave drive.

2.8 Power Supply

2.8-1 ATX 20-pin Power Connector: JPWR1

This connector supports the power button on-board. Using the ATX power supply, functions such as Modem Ring Wake-Up and Soft Power Off are supported by this mainboard.

PIN DEFINITION

PIN	SIGNAL	PIN	SIGNAL
1	3.3V	11	3.3V
2	3.3V	12	-12V
3	GND	13	GND
4	5V	14	PS_ON
5	GND	15	GND
6	5V	16	GND
7	GND	17	GND
8	PW_OK	18	-5V
9	5V_SB	19	5V
10	12V	20	5V

Warning: Since the mainboard has the instant power on function, make sure that all components are installed properly before inserting the power connector to ensure that no damage will be done.

2.8-2 Remote Power On/Off Switches: JRMS1/JRMS2

Connect to a 2-pin push button switch. If Instant-on is Enabled, every time the switch is shorted by pushing it once, the power supply will change its status from OFF to ON. **If Instant-on is Disabled: During ON stage, push once and the system goes to sleep mode: pushing it more than 4 seconds will change its status from ON to OFF.** If you want to change the setup, you could go to the BIOS Power Management Setup.

Note: The two switches are provided by the mainboard for your convenience, so you can use any of them. The two switches have the same function.

2.9 IrDA Infrared Module Connector: IR1

The mainboard provides two 5-pin infrared (IR) connectors for IR modules. These connectors are for optional wireless transmitting and receiving infrared module. You must configure the setting through the BIOS setup to use the IR function. FIR and Consumer IR are reserved functions for future Super I/O chipset.

Note: Future Super I/O (w893977ATF) chip will provide FIR & Consumer I/O. The IrDA connector support future feature, but it has not yet been tested.

2.10 Serial Port Connectors: COM A & COM B

The mainboard has two 9-pin male DIN connectors for serial ports COM A and COM B. These two ports are 16550A high speed communication ports that send/receive 16 bytes FIFOs. You can attach a mouse or a modem cable directly into these connectors.

PIN DEFINITION

PIN	SIGNAL
1	DCD (Data Carry Detect)
2	SIN (Serial In or Receive Data)
3	SOUT (Serial Out or Transmit Data)
4	DTR (Data Terminal Ready)
5	GND
6	DSR (Data Set Ready)
7	RTS (Request To Send)
8	CTS (Clear To Send)
9	RI (Ring Indicate)

2.11 Parallel Port Connector: LPT

The mainboard provides a 25 pin female centronic connector for LPT. A parallel port is a standard printer port that also supports Enhanced Parallel Port(EPP) and Extended capabilities Parallel Port(ECP). See connector and pin definition below:

PIN DEFINITION

PIN	SIGNAL	PIN	SIGNAL
1	STROBE	14	AUTO FEED#
2	DATA0	15	ERR#
3	DATA1	16	INIT#
4	DATA2	17	SLIN#
5	DATA3	18	GND
6	DATA4	19	GND
7	DATA5	20	GND
8	DATA6	21	GND
9	DATA7	22	GND
10	ACK#	23	GND
11	BUSY	24	GND
12	PE	25	GND
13	SELECT		

2.12 Mouse Connector: JKBMS1

The mainboard provides a standard PS/2[®] mouse mini DIN connector for attaching a PS/2[®] mouse. You can plug a PS/2[®] mouse directly into this connector. The connector location and pin definition are shown below:

2.13 Keyboard Connector: JKBMS1

The mainboard provides a standard PS/2[®] keyboard mini DIN connector for attaching a keyboard. You can plug a keyboard cable directly to this connector.

2.14 USB Connector: USB

The mainboard provides a **UHCI(Universal Host Controller Interface)** **Universal Serial Bus root** for attaching USB devices like: keyboard, mouse and other USB devices. You can plug the USB device directly to this connector.

PIN	SIGNAL
1	VCC
2	-Data0
3	GND
4	+Data0

2.15 Sleep Switch Connector: JGS1

Attach a power saving switch to JGS1. When the switch is pressed, the system immediately goes into sleep mode. Press any key and the system wakes up.

2.16 Sleep LED Connector: JGL1

Connect a 2-pin LED to JGL1. When the system goes into sleep mode, the LED lights up. It is always lit while the system is in sleep mode.

2.17 Modem Wake Up Connector: JMDM1

The JMDM1 connector is for used with Modem add-on card that supports the Modem Wake Up function.

PIN	SIGNAL
1	NC
2	GND
3	MDM_WAKEUP
4	NC
5	5VSB

Note: Modem wake-up signal is active “low”.

Note: To be able to use this function, you need a power supply that provide enough power for this feature.
(750 ma power supply with 5V Stand-by)

2.18 Wake-Up on LAN Connector: JWOL1

The JWOL1 connector is for use with LAN add-on cards that supports Wake Up on LAN function.

PIN	SIGNAL
1	5VSB
2	GND
3	MP_WAKEUP

Note: LAN wake-up signal is active “high”.

Note: To be able to use this function, you need a power supply that provide enough power for this feature.
(750 ma power supply with 5V Stand-by)

2.19 SB_Link™ Card Sound Connector: JSOUND

The mainboard provides a distributed DMA connector for PCI sound card with this feature, such as Creative® PCI 3D sound card.

2.20 CPU's Temperature Sensor: JSOR1/JSOR2

This is used to check the CPU temperature. The JSOR1/JSOR2 is a sensor that is placed near the processor heatsink. This will monitor the CPU temperature.

2.21 Two Color Power LED: JWLED1

The JWLED1 is for normal and suspend mode. But this LED produce two different colors.

The use needs to connect a 3-pin 2-color LED. Under different working modes (normal or suspend), the LED will show different colors. For example if the LED has green and yellow colors, if the LED shows green color during the normal operation mode, when the system enters suspend mode, LED color will turn yellow.

2.22 System Manager Jumper: JSM1

The JSM1 is used to select the SMI# source.

JSM1	Function
	SMI# source from I/O APIC (Default)
	SMI# source from PIIX4E

2.23 SCSI Connectors

The mainboard provides three SCSI connector.

2.24 SCSI Enable/Disable Jumper: JDSCSI

This jumper is used to enable or disable the SCSI chip on-board.

JDSCSI	Function
	Enabled on-board SCSI Controller
	Disabled on-board SCSI controller
