

XtMapWidget, XtSetMappedWhenManaged, XtUnmapWidget – map and unmap widgets

XtMapWidget(*w*)

Widget *w*;

void XtSetMappedWhenManaged(*w*, *map_when_managed*)

Widget *w*;

Boolean *map_when_managed*;

XtUnmapWidget(*w*)

Widget *w*;

map_when_managed

Specifies a Boolean value that indicates the new value of the *map_when_managed* field.

w

Specifies the widget.

If the widget is realized and managed and if the new value of *map_when_managed* is True, XtSetMappedWhenManaged maps the window. If the widget is realized and managed and if the new value of *map_when_managed* is **False**, it unmaps the window. **XtSetMappedWhenManaged** is a convenience function that is equivalent to (but slightly faster than) calling **XtSetValues** and setting the new value for the *mappedWhenManaged* resource. As an alternative to using **XtSetMappedWhenManaged** to control mapping, a client may set *mapped_when_managed* to **False** and use **XtMapWidget** and **XtUnmapWidget** explicitly.
