

COMPAQ DESKPRO 386/33

Once again, Compaq is giving the world a new superpower: the COMPAQ DESKPRO 386/33 Personal Computer. Never before has so much performance, storage and expansion been built into one personal computer. One that fits on a desk.

It's fully loaded with a 33-MHz Intel 386™ processor and COMPAQ Flexible Advanced Systems Architecture for optimal system performance that delivers a 35% performance improvement in CPU-intensive applications over 25-MHz 386 cache-based machines.

It goes further. Eight expansion slots enable users to customize the system for the most demanding applications. And a range of storage devices holds up to 1.3 gigabytes of data internally.

The COMPAQ DESKPRO 386/33 gives users a mini-computer level of power, with the flexibility to configure the system to match their growing needs for CAD/CAE, financial modeling, database, network and multiuser applications. All while taking advantage of innovations within the industry standard, without compromising performance.
